13. ABSTRACT (Maximum 200 words) At the request of the 857th Strategic Hospital Bioenvironmental Engineering Services, the Armstrong Laboratory Occupational and Environmental Health Directorate (AL/OE) conducted a Hazardous Waste Technical Assistance Survey at Minot AFB on 24-28 Jun 91. The scope of this survey was to address hazardous waste management practices, to explore opportunities for waste minimization, and to determine waste streams. The survey team performed a shop-by-shop determination of hazardous waste streams and met with hazardous waste managers to discuss their waste programs. Recommendations include: (1) employ proven waste reduction techniques in 857 TRANS shops, 857 CES vehicle maintenance and equipment maintenance shops, and 5 FMS aircraft maintenance shops; (2) install locking devices on each accumulation drum or tank at accumulation points; and (3) implement the use of a master control log to track numerically coded storage drums.

ACKNOWLEDGMENTS

The author wishes to thank the personnel at Minot AFB who provided information and logistic support during this survey. Maj A. J. Kwan (Chief, 857 CES/DEV), 1Lt Mark Smekrud (Environmental Engineer, 857 CES/DEVE), and Mr Gary Lonning (Environmental Engineer, 857 CES/DEVE) provided valuable information on the management of the Hazardous Waste Program and the Used Oil Program. Special thanks are given to Maj John Ellis (Chief, 857 SH/SGPB) and TSgt Leon Rushing (NCOIC, 857 SH/SGPB) who coordinated indispensable logistic support. The author appreciates the escort support by SSgt Roddray Walker and A1C Henry DeBose. Warm thanks are given to Sgt Steven Luttrull and Ms Linda Patterson who assisted in preparing the outbrief report at the "11th hour."

**HAZARDOUS WASTE TECHNICAL ASSISTANCE SURVEY
MINOT AIR FORCE BASE, NORTH DAKOTA**

INTRODUCTION

The Minot Air Force Base (AFB) Bioenvironmental Engineering Services, 857 Strategic Hospital/SGPB, requested the Air Force Occupational and Environmental Health Directorate, Bioenvironmental Engineering Division (AL/OEB), to conduct a Hazardous Waste Technical Assistance Survey at Minot AFB (Appendix A). This survey will be used for waste minimization at Minot AFB. The survey was conducted by Capt Chung H. Yen and TSgt Mark Bishop during 24-28 June 1991.

BASE DESCRIPTION

Minot Air Force Base is located 12 miles north of the city of Minot in the state of North Dakota. The major units are the 5th Bombardment Wing (5 BW), 91st Strategic Missile Wing (91 SMW), and the 857th Combat Support Group (857 CSG). The mission of 5 BW is to deter war by flying highly visible long-range missions in conjunction with 24-hour nuclear alert. The 91 SMW is responsible for providing a ready Intercontinental Ballistic Missile force that contributes to the United States' deterrence of nuclear war. The 857 CSG is currently providing support and services to the 5 BW, 91 SMW, and 23 tenant organizations.

HAZARDOUS WASTE MANAGEMENT

The hazardous waste program at Minot AFB is managed primarily through the Environmental Engineering Branch (857 CES/DEV) in Civil Engineering. Bioenvironmental Engineering Services (857 SH/SGPB) provides technical assistance and helps monitor the program through industrial shop surveys. The 857 SH/SGPB is also responsible for waste sampling at the request of the 857 CES/DEV. Individual shops are responsible for identifying, segregating, handling, packaging, labeling, and transporting the wastes generated by their shop. When wastes require disposal, the generator completes an AF Form 2005 and submits it to Base Supply. Supply generates a DD Form 1348-1 using the information contained on the AF Form 2005.

At Minot AFB, ND, the unit cost of hazardous waste disposal had transitioned from a volumetric basis to weight basis. At the time of the survey, the hazardous waste disposal cost was in the range of \$2.50 to \$5.50 per pound, including the weight of the drum.

The Used Oil Management Program (UOMP) at Minot is also managed by DEV but separately from the Hazardous Waste Management Program (HWMP). Minot Defense Reutilization and Marketing Office (DRMO) operates a state permitted large quantity generator storage facility pursuant to Title 40 Code of Federal Regulations Part 264 (40 CFR 264) and chapter 23-20.3 (Hazardous Waste Management Act) of the North Dakota Century Code and Article 33-24 (Hazardous Waste Management Rules) of the North Dakota Administrative Code.

OBJECTIVES

The main objectives of this survey are to identify avenues of waste minimization and evaluate management of hazardous waste.

PROCEDURE

The first step of the survey was to review the base hazardous waste management plan and identify shops that are potential generators of hazardous waste streams. Next, the team visited Minot Defense Reutilization and Marketing Office (DRMO) hazardous waste storage facility, all satellite accumulation points and a majority of hazardous waste accumulation points, and used oils and fluids collection points to observe accumulation management practices. Then, 38 industrial shops were visited to observe industrial operations, to discuss chemical waste disposal practices with shop supervisors and personnel, and to complete interview forms (Appendix B). A master list of the 38 industrial shops is presented in Appendix C.

The Base HWMP was discussed with the following individuals:

Maj John Ellis	Chief, 857 SH/SGPB
Maj A. J. Kwan	Chief, 857 CES/DEV
Mr Gary Lonning	Environmental Engineer, 857 CES/DEVE
1Lt Mark Smekrud	Environmental Engineer, 857 CES/DEVE
Ms June Hoffer	Environmental Protection Specialist, Minot DRMO
TSgt Leon Rushing	NCOIC, 857 SH/SGPB

SUMMARY OF WASTE DISPOSAL PRACTICES AT MINOT AIR FORCE BASE

A shop-by-shop summary of disposal practices is contained in Appendix D. The waste disposal practices for different categories of wastes are summarized in this section and in Appendix E.

- Used oil and fluids are accumulated in 55-gal drums and above ground storage tanks at or near the points of generation. When full, the drums are transported to used oil collection points (UOCP) operated by unit managers. Currently, the used oil and fluids are pumped out of the storage containers and transported for energy recovery by a local firm under a Base Civil Engineering contract. The Base Used Oil Program Manager contacts the contractor to haul the used oils and fluids from UOCPs that are near full storage capacity.

- Waste paints, thinners, and strippers are placed in 55-gal drums at the hazardous waste satellite accumulation points (HWSAP), transported to and secured at the unit hazardous waste accumulation points (HWAP), and transferred to Minot DRMO for final disposition by a transport/disposal company. Floor sweepings of paint dusts from the 857 Transportations (TRANS) Allied Trades Shop are disposed of as municipal waste.

- Waste emulsifiers and dye penetrants from Nondestructive Inspection (NDI) shops are drummed and disposed of as hazardous wastes.

- Waste fuels consisting of JP-4, mogas, diesel, etc., are accumulated in 55-gal drums and/or above ground tanks at or near the point of generation. Once full, they are transported to the unit UOCPs for contractor pickup.

- Soiled oily rags and towels are usually disposed of as municipal waste. However, waste rags and towels soiled or soaked with solvents and/or other hazardous wastes are collected and disposed of by Minot DRMO as hazardous waste. The disposal cost was at \$2.51 per pound.

- Most spent lead-acid batteries are turned-in to local vendors who supply the base with new batteries. The 91st Field Maintenance Squadron (FMS) Power Refrigeration and Electrical (PREL) Shop turn in their batteries to Minot DRMO for disposal.

- Chemicals used in the hospital laboratories are used in process and discharged to the sanitary sewer system.
- Empty aerosol paint cans are disposed of as municipal waste as authorized by state law. However, unspent aerosol paint cans are collected by shop personnel and disposed of through Minot DRMO.
- Waste fixers from 5 FMS NDI Shop and 857th Strategic Hospital (SH) Medical Radiology are processed through silver recovery systems and the effluents are discharged into the base sanitary sewer system.
- Paint filters from dry paint booths at corrosion control shops are collected by shop personnel and disposed of through Minot DRMO as hazardous wastes. However, the 857th Auto Hobby Shop, at the time of the survey, disposed of the paint filters as municipal wastes.
- Spent/waste antifreeze is washed down the drain to the sanitary sewer.
- An estimated 1.1 million gallons a year of rinsewater from the 5 FMS Aircraft Washrack Shop is discharged into the base sanitary sewer system.
- Wastestreams from 857th SH Dental Services are included on page 31 of Appendix D, Disposal Practices by Shop at Minot AFB.

OBSERVATIONS AND RECOMMENDATIONS

Waste Minimization Opportunities

Some shops are using effective means of waste minimization. Security Police Firing Range (857 SPS/SPC) is recycling PD-680 Type II degreasing solvent by filtering out suspended sludge. They currently generate less than 50 oz of sludge a year. The 857 TRANS General Purpose Shops operate 2 high pressure steam parts cleaning systems. This system employs a biodegradable detergent eliminating petroleum hydrocarbon distillates, a potential hazardous waste. This system normally costs about \$4,000. The 91 FMS PREL Shop is utilizing an excellent chromate rinse recovery system. Current chromate rinse has been reduced 90% compared to the nonrecovery method.

RECOMMENDATION: Wherever possible, employ these waste reduction techniques to applicable operations across base. Use these techniques in 857 TRANS shops, 857 CES vehicle and equipment maintenance shops, and 5 FMS aircraft maintenance shops. Advise to HQ SAC/DEV/SGPB. Emphasize cost savings in handling, disposal and transporting hazardous wastes.

Management of Hazardous Wastes and Used Oils Collection Points

There is a prevalence of unsecured collection containers at HW collection points and UOCs. This condition creates the potential for inadvertent mixing of hazardous wastes with nonhazardous used oils, fluids or fuels, a common and costly problem.

RECOMMENDATION: Install locking devices on each accumulation drum or tank at HW collection points and UOCs. Limit the access to collection point managers and unit program monitors. With analysis cost at about \$1,800/drum and disposal cost at \$2,000/drum, unnecessary expenditures resulting from inadvertent mixing of hazardous waste with used oil and fluids can be avoided.

Tracking of Waste Disposal Drums

The shops are doing an excellent job of identifying and segregating used oil, fluids and fuels from hazardous wastes. HW Accumulation Points (AP) are secured and controlled by site managers. Accumulation logs are implemented and extensively used. A noteworthy HW AP was formally managed by SSgt Thorpe of 5 FMS Aircraft Structural Repair, located near Bldg 862. This accumulation point is in immaculate condition. However, about half of the UOCs surveyed contain unidentified collection drums. Their shop of origin is difficult to track. At most of the HW collection points, the drums are marked and identified by content but not numerically stenciled and tracked. A system is needed to track disposal drums to prevent occurrence of abandoned drums at collection points.

RECOMMENDATION: A simple and proven method is currently used at other bases. A system is established to numerically code all drums used in shops for waste storage (hazardous and nonhazardous). The numbers must be centrally assigned and recorded by a responsible individual through the use of a master control log. This number is then verified at HW APs and UOCs.

Regulatory Compliance

The Base Auto Hobby Shop is currently disposing of paint booth filters as municipal waste. They have not made a waste determination as required in 40 CFR 261.

RECOMMENDATION: The Base Bioenvironmental Engineering Services should submit a sample of the paint booth filter for analysis of hazardous waste characteristics. Proper disposal procedures should be determined based upon analytical results.

Getting the Word Out

Minot AFB has several excellent elements in their Hazardous Waste Management Program. This program is one of the best large quantity generator programs in the Air Force.

RECOMMENDATION: Recommend the Environmental Engineering Branch of the Base Civil Engineering prepare a briefing package on their program and submit it to HQ SAC/DEV/SGPB for a command-wide training guide. The package should highlight:

- the features of program initiative in managing hazardous wastes and recyclable materials separately.
- the effectiveness of waste accumulation logs.
- the management initiatives of tracking and disposing of oil/water separator sludge, oil and wastewater. This program is a first in the Air Force.
- their successes in managing a permitted storage facility as a large quantity generator.
- implementation features of the Environmental Abuse Program.
- management of shop cleaning articles.
- segregation and collection of regulated aerosol paint cans.

Request Letter

DEPARTMENT OF THE AIR FORCE
857 STRATEGIC HOSPITAL (SAC)
MINOT AIR FORCE BASE ND 58765-5340

REPLY TO
ATTN OF : SGPE

7 Aug 1990

SUBJECT : Request for Hazardous Waste Technical Assistance Survey

TO : HQ SAC/SGPE
AF OEEL/EQE
IN TURN

1. Request a hazardous waste technical assistance survey at Minot AFB. The purpose of this survey would be to assess hazardous waste management practices and explore opportunities for hazardous waste minimization. The increasing cost of hazardous waste disposal, including sampling and analysis, make waste minimization an essential factor in improving the efficiency of our program. The results of this survey will be used to pinpoint ways in which we may improve methods of selecting materials and properly disposing them.

2. Please contact me at AUTOVON 453-3398 for further information.

Signed

JOHN C. ELLIS II, Major, USAF, BSC
Chief, Bioenvironmental Engineering

LEGEND: DRMO denotes Defense Reutilization and Marketing Office
 SS denotes Sanitary Sewer
 CD denotes Contractor Disposal
 MT denotes Municipal Trash
 REC denotes Recycled
 UIP denotes Used In Process
 CDER denotes Contractor Disposal for Energy Recovery
 VE denotes Vendor Exchange
 OWSSS denotes Oil/Water Separator then down Sanitary Sewer

APPENDIX E

Summary of Waste Disposal Practices for Each Waste Category

Category: Oils And Fluids

Shop	Product	QTY(GAL/YR)	Disposal
857 CES Power Production	Motor Oil	600	CDER
5 FMS Repair & Reclamation	5606 Hydraulic Fluid	10	CDER
857 TRANS Fire Truck Maintenance	Synthetic Oil	80	CDER
857 Auto Hobby	30w Oil & Waste Fluids	2250	CDER
857 CES Grounds	Waste Oils	55	CD
5 FMS Propulsion	Fuel & Hydraulic Fluid	288	CD
5 FMS Aircraft Washrack	Synthetic Oil	60	OWSS
857 TRANS Refueling Maintenance	Oils & Fluids	200	CD
5 MMS Equipment Maintenance	Brake & Hydraulic Fluids	7200	CD
5 MMS Equipment Maintenance	General Purpose Oil	780	CD
5 FMS Non-Powered AGE	5606 Fluids	5	CD
5 FMS Pneudraulics	Fluids	660	CD
5 FMS NDI	Magnetic Particle Oil	550	DRMO
5 MMS Support	Motor Oil	10	CD
5 MMS Support	Hydraulic Fluid	10	CD
OOLAC Rivet Mile	Motor Oil	400	CD
OOLAC Rivet Mile	Hydraulic Fluid	110	CD
5 MMS Missile Check-Out	Hydraulic Fluid	36	CD
857 CSG Golf Course Maintenance	Motor Oil	240	CD
857 CSG Golf Course Maintenance	Transmission Fluid	2	CD
857 TRANS D & QA	30w Oil	2640	CD
857 TRANS Heavy Equipment	Motor Oil	3600	CD
857 TRANS General Purpose 1	Motor Oil	600	CD
857 TRANS General Purpose 1	Transmission Fluid	12	CD
857 TRANS General Purpose 2	Oils And Fluids	900	CD
